

Instructions for recycling of Forankra's products

Metal

Example: Chains, lifting components, cargo bars, hooks, rings and triangles.

Separate the metal from other material on the product. Thereafter put the metal in metal recycling.

Cartons/Cardboard boxes

Example: Carton/Cardboard box and lid, cardboard protection and cardboard paper

Cartons can often be reused. If not they should be folded and flattened, smaller cartons are placed in larger ones to save space. Thereafter put them in paper recycling.

Plastic

Example: Edge protection, stretch film, dunnage bags, PP straps and pallet truck stop.

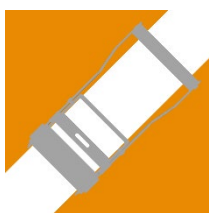

Plastic articles as in the examples above are placed in plastic recycling. If there are other substances that are not plastic in the product these should be removed before the plastic is put in the plastic recycling.

Combustible

Example: Polyester strap, stop block, pallet truck stop (rubber), packing cord, yarn, rope and paper.

The non-recyclable items are placed in combustibles if there are no other recycling alternative than energy recovery.

Lashings

Example: Long part, short part and complete lashings

Lashings consist of three possible components: metal, polyester strap and plastic. Cut the polyester strap where it fits together with tensioners and end fittings. The end fittings are placed in metal recycling. If the tensioner has a plastic handle, put it in combustible, otherwise in metal recycling. Polyester straps are placed in combustible.
